Introduction

Using Your Operator's Manual

Read this entire operator's manual, especially the safety information, before operating.

This manual is an important part of your machine. Keep all manuals in a convenient location so they can be accessed easily.

Use the safety and operating information in the attachment operator's manual, along with the machine operator's manual, to operate and service the attachment safely and correctly.

If your attachment manual has a section called Preparing the Machine, it means that you will have to do something to your tractor or vehicle before you can install the attachment. The Assembly and Installation sections of this manual provide information to assemble and install the attachment to your tractor or vehicle. Use the Service section to make any needed adjustments and routine service to your attachment.

If you have any questions or concerns with the assembly, installation, or operation of this attachment, see your local John Deere dealer or call the John Deere Customer Contact Center at 1-800-537-8233 for assistance.

Warranty information on this John Deere attachment can be found in the warranty that came with your John Deere tractor or vehicle.

Product Identification

Product Compatibility

This Sprayer is designed for use with John Deere Gator™ Utility Vehicles.

Contact your John Deere dealer for specific utility vehicle compatibility information.
Understanding The Machine Safety Labels

The machine safety labels shown in this section are placed in important areas on your machine to draw attention to potential safety hazards.

On your machine safety labels, the words DANGER, WARNING, and CAUTION are used with this safety-alert symbol. DANGER identifies the most serious hazards. The operator’s manual also explains any potential safety hazards whenever necessary in special safety messages that are identified with the word, CAUTION, and the safety-alert symbol.

A- Warning MT3980
B- Warning M152038*
C- Warning M150930*

* Label installed on rear tank for 90 gallon sprayer only.

WARNING M152038

AVOID INJURY FROM EXPLOSION

• Do not place gas container inside cargo box bed when filling.
• Place gas container on ground when filling.

WARNING M150930

RIDERS CAN FALL OFF AND BE KILLED

• Maximum of one person to a seat
• No riders in box or anywhere else

WARNING MT3980

• To avoid injury from chemical hazards, wear protective clothing. Read and follow chemical manufacturer's labels and instructions.

Safety

Read Safety in Machine Operator’s Manual

Read the general safety operating precautions in your machine operator’s manual for additional safety information.

Operate Safely

• Read the machine and attachment operator's manual carefully. Be thoroughly familiar with the controls and the proper use of the equipment. Know how to stop the machine and disengage the controls quickly.

• Do not let children or an untrained person operate machine.

• Make any necessary adjustments before you operate. Never attempt to make any adjustments while the engine is running, unless if recommended in adjustment procedure.

• Take all possible precautions when leaving the machine unattended. Shut off the engine before making any repairs, adjustments, or inspections. Lower the attachment, lock the parking brake, stop the engine, and remove the key.

• Look behind machine before you back up. Back up carefully.

• Do not let anyone, especially children, ride on machine or attachment. Riders are subject to injury such as being struck by foreign objects and being thrown off. Riders may also obstruct the operator's view, resulting in the machine being operated in an unsafe manner.

• Use only attachments and accessories approved by the manufacturer of this product.

• If the machine vibrates abnormally, stop the engine and check immediately for the cause. Vibration is generally a warning of trouble.

• Always refer to the Storage section of the operator's manual for important details if storing this product for a long period of time.

• Keep people and pets out of the work area. Stop machine if anyone enters the area.

• If you hit an object, stop the machine and inspect it. Make repairs before you operate. Keep machine properly maintained and in good working order. Keep all shields and guards in place.

• Always inspect the sprayer completely before and after each use. Before pressurizing the system, check to be sure all fittings and hoses are tightly installed. Be sure guards and shields are in good condition and fastened in place. Make any necessary adjustments before you operate.

• Never use the sprayer during windy conditions.

• Always release pressure in the system before filling, cleaning or servicing the sprayer.

• Do not put nozzle tip or other sprayer parts to your lips to blow out dirt. Use compressed air.

• If the sprayer is mounted to the bed of a utility vehicle, never raise the bed with the sprayer installed. Empty the sprayer and remove it from the bed if you need to raise the bed for any reason.

Parking Safely

1. Stop vehicle on a level surface, not on a slope.

2. Lock park brake.

3. Stop engine.

4. Remove key.

5. Before you leave the operator's seat, wait for engine and all moving parts to stop.
6. Disconnect the negative battery cable or remove the spark plug wires (for gasoline engines) before servicing the machine.

Mix and Handle Chemicals Safely

- It is best to wear full cover clothing and always wear protective goggles and rubber gloves to protect yourself while handling chemicals.
- Follow instructions on chemical container labels.
- Open all chemical containers carefully, using proper tools.
- Open, pour, weigh and mix chemicals in a well-ventilated area.
- Reserve all equipment used for the application of chemicals exclusively for that purpose.
- Prohibit all smoking, drinking and eating food in chemical-handling area.
- It is a good practice to take a soapy shower immediately after the using the sprayer to apply chemicals.
- Wash all clothing worn when using chemicals separately in the laundry after spraying is completed.

Read Chemical Container Label

- Chemicals can be dangerous. Improper selection or use can injure persons, animals, plants, soils or other property. Select the right chemical for the job and handle and apply with care.
- Read the instructions, precautions, and warnings on the container label before opening. Use the product strictly according to label directions for specific applications, in the amounts specified, at the times specified and only when needed.
- Keep the container closed tightly except when preparing the mix.
- Do not remove labels from chemical containers. Store all chemicals in their original containers.
- Do not mix chemicals unless stated on the container label.
- Store chemicals when not in use according to the container label.

Handle Chemical Products Safely

- Direct exposure to hazardous chemicals can cause serious injury. Potentially hazardous chemicals used with John Deere equipment include pesticides, herbicides and fungicides.
- A Material Safety Data Sheet (MSDS) provides specific details on chemical products: physical and health hazards, safety procedures, and emergency response techniques.
- The MSDS should be obtained from the chemical dealer at the time of the chemical purchase.
- Check the MSDS before beginning any job using a hazardous chemical. Know exactly what the risks are and how to do the job safely. Always wear recommended personal protection equipment.

Practice Safe Maintenance

- Only qualified, trained adults should service this machine.
- Understand service procedure before doing work. Keep area clean and dry.
- Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
- Never lubricate, service or adjust the machine or attachment while it is moving. Keep safety devices in place and in working condition. Keep hardware tight.
- Keep hands, feet, clothing, jewelry, and long hair away from any moving parts, to prevent them from getting caught.

Safety - 4
Dispose of Chemicals Properly

- Proper disposal of excess spray material is very important. If you have excess tank solution, it is best to dilute it with water and apply it to the area you previously treated.
- Never dump solution into a drain or near a lake or stream.
- Chemicals containers should be triple-rinsed, with the rinse water added to the sprayer tank. Do not burn empty chemical containers. Dispose of containers at recycling centers.

Handling Waste Product and Chemicals

Waste products, such as, used oil, fuel, coolant, brake fluid, and batteries, can harm the environment and people:

- Do not use beverage containers for waste fluids - someone may drink from them.
- See your local Recycling Center or authorized dealer to learn how to recycle or get rid of waste products.
- A Material Safety Data Sheet (MSDS) provides specific details on chemical products: physical and health hazards, safety procedures, and emergency response techniques. The seller of the chemical products used with your machine is responsible for providing the MSDS for that product.

Assembly - 5
Spray Wand Assembly

For Standard 45 gal units

1. Install hose tender bracket (A) using two 5/16 x 5/8 in. flange bolts (B).

2. Install large wand clip (C) with 10-24 x 3/8 in. truss head screw (closest to pump).
3. Install small wand clip (D) with 10-24 x 3/8 in. truss head screw.

For High Performance Units

1. Attach 1/4 in. bent pin (A) to hose wrap bracket (B) using two 1/4 in. nuts (C).
2. Use two 5/16 x 5/8 in. flange bolts (D) to attach hose wrap bracket (B) and hose clamp (E) to tank.
3. Wrap hose in direction shown (F) and hang handgun on 1/4 in. bent pin (H).

Frame Assembly

1. Connect the right tank support (A), left tank support (B), the rear angle (C), and the inner boom support brackets (D) as shown using four 5/16 x 3/4 in. carriage bolts (E) and four 5/16 in. flange nuts (F).
NOTE: 45 gallon sprayers use the outside (H) set of holes and 25 gallon uses the inside (I) set. Fasten the rubber feet to the frame with 5/16 in. flange nuts.

2. Invert tank and fasten assembly to frame using four 5/16 x 5/8 in. flange bolts (G).

3. Remove the two M8x60 star head bolts from the front of the bed. Replace with 5/16 x 3 in. bolt (J), 5/16 in. washer (K) and spacer tube (L) as shown. Fasten underneath bed with 5/16 in. locknut.

4. With tailgate down, place the sprayer in the rear of the bed aligning the bolts that were just placed in the bed with the groove in the tank support frame pieces. Slide the sprayer forward until the bottom lip on the rear angle (C) falls between the bed and the tailgate.

5. Install rubber feet (M) on the inner boom support bracket (D) just below the top of the tailgate using 5/16 x 3/4 in. flange bolt (N) and 5/16 in. flange nut (O).
6. Locate two outer boom support brackets (P). Install rubber feet (M) in top slot (Q) and in third hole (R) from bottom using 5/16 x 3/4 in. flange bolts (N) and 5/16 in. flange nuts (O).

7. Loosely install locking knobs (S) on outer boom support brackets (P); assemble in the following order:
   a. 3/8 x 1-1/2 in. carriage bolt (T) inserted upward through outer boom support brackets
   b. 2 in. square flat washer (U)
   c. 3/8 in. lockwasher (V)
   d. 3/8 knob (S)

8. Place outer boom support brackets (P) under inner boom support brackets (D) making sure rubber feet (M) are tight against the tailgate. Tighten lock knob (S).

9. Install boom "L" bracket (W) (long side out) at desired height using 5/16" x 3/4 in. flange head bolts (X) and 5/16 in. flange nuts (Y). If rubber foot interferes with the boom "L" bracket, use the 5/16 x 1 in. bolt provided.

HP Boom Assembly

NOTE: 150 in. Precision and Boomless Nozzles come Pre-assembled.

1. Position boom (A) with center nozzle (B) between the boom "L" brackets. Secure with two 5/16 in. square u-bolts (C) and four 5/16 in. flange nuts (D).
Standard Boom Assembly

1. Assemble and install the spray boom with large holes (A) at each end and large holes (B) at the center overlapping. Fasten to boom support using two 5/16 x 1 in. flange head bolts (C) and 5/16 in. flange nuts (D) as shown.

2. Insert the fittings into the large holes and secure with nut. Install the spray nozzles by inserting a spray tip screen into the fitting, and securing the spray nozzle to the fitting with the nozzle cap.

3. Adjust spray tip pattern:

- Align the center nozzle to spray straight back and angle the outer nozzles (E) out 30 degrees and tighten (F).

Wiring

**NOTE:** Wiring requires a Gator accessory harness - John Deere part number AM140972.

1. Locate battery under passenger seat.

2. Reach under panel (A) and locate wire terminal (B). Plug accessory harness into terminal.

3. Plug fused battery lead provided with sprayer into accessory harness.

Follow directions located in your Sprayer Remote:

1. On the remote receiver box, plug the wires labeled “12v Out” into the pump.

2. Clean and dry a flat surface on the sprayer tank within reach of the remote receiver box and adhere with enclosed quick lock fastener.

3. Plug in 61 cm (24 in.) extension wire to the wires labeled “12v In” aligning the red and black wires.

4. Make sure passenger seat is in up position. Locate space between roll bar and plastic panel (C). Feed wire (D) through gap.

5. Locate wire from underside passenger seat location. Plug into the fused battery lead installed earlier.
Preparing Vehicle

Machine Requirements
Make sure machine tire pressure is correct for attachment weight. (See your machine operator’s manual for the correct pressure.) Your machine requires the following:
• 12-Volt Outlet

Removing and Storing

Removing Sprayer
1. Park machine safely. (See Parking Safely in the Safety section.)
2. Empty the sprayer tank. (See Dispose of Chemicals Properly in the SAFETY section.)
3. Disconnect pressure hose to sprayer boom.
4. Disconnect 61 cm (24 in.) extension from gator battery harness.
5. Loosen locking knobs (A) at top of boom support brackets. Boom and outer support brackets slide apart as shown. Lower tailgate.
6. Lift rear end of sprayer, slide rearward and remove assembly from cargo box.

Store Sprayer Safely
1. Pump all spray material from tank. (See Dispose of Chemicals Properly in the SAFETY section.)
2. Rinse tank, pump, spray wand and all hoses thoroughly with fresh clean water.
3. Repeat step 2 several times.
4. Wipe out sump with a clean cloth or paper towel.
5. Drain hoses and pump filter.
6. Check sprayer for worn or damaged parts. Replace parts as needed.
7. Tighten loose hardware.
8. Store sprayer in a place where it will not freeze.

Operating

Filling Sprayer Tank
CAUTION: Avoid injury! Chemicals can be dangerous. Avoid injury to operator or bystanders:
• Read chemical container label for mixing and handling instructions. A Material Safety Data Sheet (MSDS) should be supplied by the chemical dealer and provides proper safety information.
• Wear proper clothing and safety equipment while handling or applying spray chemicals.
• Wear a full covering of clothing, protective goggles and rubber gloves.
• Prohibit all smoking, drinking, and eating around chemicals.
• When filling tank, never allow end of water hose to contact chemical mixture.

Draining and Cleaning Sprayer Tank
CAUTION: Avoid injury! To avoid chemical injury:
• Wear protective clothes, gloves and goggles when handling sprayer.
• Do not store sprayer with chemicals in tank.
• If spray comes in contact with your body, immediately follow directions on chemical container pertaining to spray material.

IMPORTANT: Avoid damage!  Chemicals can be dangerous. Avoid injury to operator or bystanders:

NOTE: When filling tank, consider area to be sprayed and amount of solution required to complete the task.
When filling dual tanks, mix spray material equally in both tanks.

1. Clean area around tank filler cap to prevent tank contamination.
2. Remove tank filler cap and fill tank.
3. Install tank filler cap.

IMPORTANT: Avoid damage! Clean any spills immediately with clean water prior to operating the sprayer.

IMPORTANT: Avoid damage!
Proper disposal of excess spray is very important. Dilute it with water and apply it to area previously treated.
Never dump excess into a storm drain or near a lake or stream.

1. Remove tank drain cap, and empty sprayer tank:
   • Empty remaining solution into an appropriated container for proper disposal.
2. Spray all inside surfaces of tank with low pressure garden hose to remove any remaining solution. Rinse several times to make sure sprayer tank is clean and free of chemicals.
3. Replace drain cap and run fresh, clean water through pump, spray wand and all hoses thoroughly.
4. Once the tank is empty, wipe out inside of sprayer tank with a clean cloth or paper towel.

**Starting and Stopping Sprayer**

**CAUTION:** Avoid injury! Standing in a machine while it is moving can result in loss of balance and falling from machine. Never operate machine while standing. For machines that can carry passengers, the passenger must remain seated at all times.

**IMPORTANT:** Avoid damage! Operate sprayer with transport vehicle running to avoid discharging the battery.

1. Push On button (A) to start the sprayer.
2. Push Off button (B) to stop the sprayer.

**Sprayer Controls**

Pump and valve assemblies are different for each model. Locate model below that corresponds to your unit for correct control definition.

**25 Gallon and 45 Gallon Standard**

Valve (A) is used to control spray to the spray wand or boom:
- In the open position (valve in line with hose) spray will flow to the boom.
- In the closed position (handle perpendicular to hose), spray will flow to spray wand only.

**HP 45 Gallon**

Turn knob (A) clockwise to control pressure and recirculation.
Turn knob (A) counter clockwise to recirculate more material to tank and adjust pressure to boom or wand.
Use valve (B) to route spray to spray gun or boom. The direction the handle is pointing, is the direction of flow.

**Directing Spray Flow to Booms**

Flow to the outer spray nozzles on the 150 in. and boomless nozzles can be controlled with the in-line valve installed on the boom. When valve handle is parallel to hose, it is open. When the valve handle is perpendicular to hose, it is closed.

**NOTE:** Standard boom does not offer this option:
- 150-inch Precision Folding Boom:
  - 30 in. - both outer booms in OFF position
  - 90 in. - one outer boon in OFF position
  - 150 in. - both boom extensions in ON position
- Boomless Nozzles:
  - 30 in. - both outer booms in OFF position
  - 12 ft - one outer boon in OFF position
  - 24 ft - both boom extensions in ON position

**Operating Spray Wand**

**NOTE:** It is not recommended to use wand while operating the machine. Turn machine on for wand use, but do not maneuver machine unless wand and hose are in normal storage position on the tank.

1. Turn shut-off valve lever perpendicular to hose.
Operating MX45502

2. Squeeze handle (A) to spray.
   • Push lock (B) forward to lock handle into the on position.
3. Adjust nozzle:
   • Nozzle Angle - Loosen locknut (C). Turn nozzle (D) as desired and tighten locknut.
   • Nozzle Spray Pattern - To change spray pattern, tighten or loosen nozzle (D) as desired.

Using High Performance Spray Gun
1. Turn selector lever to spray gun position.

Using Calibration Chart
The spray nozzles on your sprayer are TF-VP3, which matches up with the calibration chart. Look at the calibration chart. Use your vehicle speed and desired gallons per acre (gpa), find the pressure (psi) necessary to

Calibrating the Sprayer
1. Drive vehicle and sprayer (half-full is optimal) across a measured distance at a constant speed. There can be no change in speed while measuring time. Speed should be a comfortable speed for spraying.
2. Have someone measure the amount of time (in seconds) it takes to travel the measured distance.
3. Speed can be found by entering data into the equation: speed (mph) = distance (ft) x 60/time (sec) x 88, or by consulting the following table. It is helpful to note throttle location, gear and/or RPMs in order to maintain accuracy.

Using High Performance Spray Gun
1. Turn selector lever to spray gun position.

2. Squeeze handle (A) to spray.
3. Adjust mist to stream using lever (B).
4. Spray guard (C) can be adjusted by loosening (D) and sliding spray guard to desired position. Spray guard is intended to keep overspray off hands.
5. Flip handle lock (E) forward to lock handle in ON position.

Standard Gator Sprayer
All capacity standard gator sprayers operate at a fixed pressure through the boom and spray wand. Although the pressure can be adjusted to the boom by partially opening the boom control valve, it is recommended that the valve is operated in full open position. Using the following charts to select desired speed and application rate.

Using Calibration Chart
The spray nozzles on your sprayer are TF-VP3, which matches up with the calibration chart. Look at the calibration chart. Use your vehicle speed and desired gallons per acre (gpa), find the pressure (psi) necessary to
achieve your GPA. It is important to note that lower pressure settings will result in less spray drift.

Example:
Assume you have found your vehicle speed to be 4 mph, your nozzles are Grey (TF-VP3), and you want to spray 20 GPA. By looking at the chart, you find that you should set the sprayer pressure at 20 psi in order to apply 20 GPA.

**NOTE:** Optimum spray performance is achieved between 20-25 psi. When shutting off tips use the regulator valve to adjust your boom pressure accordingly.

### Adjusting Pressure on Sprayer

**NOTE:** All calibration needs to be done with clean water.

---

**HP Sprayer Pressure Setting:**
You have found the correct pressure setting, but must now adjust sprayer to that pressure setting. The relief valve (A) controls the sprayer pressure and is located directly beside the pressure gauge. When ready to spray, turn relief valve until necessary pressure is achieved. Sprayer is now calibrated.

**Useful Formulas**

GPA = gallons per acre
GPM = gallons per minute
MPH = miles per hour
GAL/1000ft² = gallons per 1000 sq. ft.
W = nozzle spacing in inches
GPM/per nozzle = gpa x mph x W / 5940
GPM/per nozzle = gal/1000ft² x mph x W / 136
GPA = gallons per 1000 sq. ft. x W
GAL/1000ft² = 136 x gpm (per nozzle) / mph x W

**Notice:** Avoid contamination when switching from one chemical to another chemical in the sprayer where contamination must be prevented. Wash with tank cleaner and water throughout the tank, pump, and all hoses. Flush with water two to three times. Herbicides such as 2-4D are hard to remove. Follow instructions on procedures noted on all labels.
Lifting Sprayer Safely
• Use caution when lifting the sprayer to help prevent possible injury.
• Empty tank before attempting to lift.

Transporting Sprayer Safely
• Use caution when transporting the sprayer to help prevent possible injury.
• Push pump switch to OFF position.
• When sprayer is filled with liquid, the extra weight on the back of a machine could change the stability of the machine.

Cleaning Spray Nozzle

Standard Boom

1. Remove spray nozzle (A) from sprayer.
2. Disassemble filter (B) and spray tip (C).
3. Wash filter and spray tip in a non-flammable solvent.
5. Put flat side of filter in spray nozzle.
6. Install assembly on sprayer and tighten nozzle.

HP Booms

1. Remove spray nozzle (A) from sprayer.
2. Remove spray tip (B) and gasket (C) from spray nozzle (A).
3. Remove screen (D) from nozzle socket on boom. Replace screen if damaged.

**IMPORTANT: Avoid damage! Do not use a wire to clean the opening (E) in the spray tip.**
4. Wash screen (D) and spray tip (B) in a nonflammable solvent.
5. Align flat side (F) of spray tip with flat on opening of spray nozzle (A), and install spray tip into nozzle.

**NOTE: Verify that the opening (E) in spray tip is pointing down when nozzle assembly is installed on nozzle socket.**
6. Install screen (D) into nozzle socket on boom.
7. Install nozzle assembly on nozzle socket.

Cleaning Pump Suction Screen

1. Remove tank cover (A).
2. Locate suction screen (B) inside sprayer tank.
3. If necessary, unscrew suction screen and clean with liquid detergent and warm water.
4. If suction screen was removed, install on suction hose and position in lowest depression inside tank.
5. Install and tighten tank cover.

Cleaning Handgun Nozzle

1. Unscrew nozzle (A) from spray tip (B).
2. Loosen nut (C) and remove spray tip (B) from angled fitting on wand.
3. Wash nozzle and spray tip with liquid detergent and warm water.
4. Inspect O-rings and replace as needed.
5. Slide nut over spray tip and install on angled fitting on wand.
Troubleshooting

6. Install nozzle on spray tip.

Adjusting Pump
1. Park machine where spray will do no damage.
2. Stop engine.

IMPORTANT: Avoid damage! To prevent pump damage, stop turning wrench as soon as pump runs smoothly.

4. Using a hex wrench, turn set-screw (A) clockwise until pump runs smoothly.
5. Stop sprayer.

Using Troubleshooting Chart

If you are experiencing a problem that is not listed in this chart, see your authorized dealer for service.

When you have checked all the possible causes listed and you are still experiencing the problem, see your authorized dealer.

Specifications

Sprayer
- Tank - 25 Gallon: 114 L (25 gallon)
- Tank - 45 Gallon: 170 L (45 gallon)

Pump:
- Type: Electric Motor and Diaphragm
- Manufacturer: John Deere
- Current Draw: 7 amp
- Fuse: 15 amp
- System Pressure (Standard): 690 kPa (100 psi)
- System Pressure (HP): 690 kPa (100 psi)
- Spray Rate (Standard): 8.3 L/min (2.2 gal/min)
- Spray Rate (HP): 14.0 L/min (3.1 gal/min)
- Suction Hose Strainer: Stainless Steel
- Spray Tip Material: Plastic
- Sprayer Wand:
  - Material (Standard): Plastic with Brass Tip
  - Material (HP): Plastic, Brass, Alloys
- Adjustment: Fan To Stream

Sprayer:
- Spraying Width: 305 cm (120 in)

Weight - 25 Gallon Sprayer:
- Empty: 18 kg (39 lb)
- Full: 109 kg (239 lb)

Weight - 45 Gallon Sprayer:
- Empty: 21 kg (46 lb)
- Full: 184 kg (406 lb)

Getting Quality Service

John Deere Quality Continues with Quality Service

John Deere provides a process to handle your questions or problems, should they arise, to ensure that product quality continues with quality parts and service support.

Follow the steps below to get answers to any questions you may have about your product.

1. Refer to your attachment and machine operator manuals.
2. In North America or Canada, call John Deere Special Services at 1-888-867-2238 and provide product serial number (if available) and model number.
The sprayer is equipped with a recirculation valve (A) to aid in material agitation and pressure control. The location of this valve will vary with the sprayer model. This valve is in the “open” position when the valve handle is in line with the hose (pictured), “closed” when perpendicular to the hose.

Adjusting the recirculation valve between the open/closed positions will affect the pressure coming through the spray wand or boom tips.

- Closed position is full pressure through spray wand or boom.
- It may be helpful to adjust the pressure when spraying with the spray wand to avoid damage to plants from excess pressure.
- If your sprayer is equipped with a boom, this valve should be in the “closed” position when operating the boom.
